

AAA ENVIRONMENTAL POLICY

SCOPE

As a designer, manufacturer and supplier of automotive components AAA will undertake these functions in a responsible manner that will preserve, protect and where practicable enhance the local and global environment. AAA is a world class manufacturing facility and will champion enhanced environmental preservation through the process of continuous improvement of all aspects of its operations which impact environmental considerations.

Measurable targets and objectives are set annually and the performance levels of responsible departments are measured monthly with the overall objective being to sustain an environmentally friendly workplace.

Ultimate responsibility for the environment rests with the Managing Director who ensures commitment to environmental plans, activities and performance. The HR Department is the responsible Manager for environmental compliance management at AAA.

In gauging the impact on the environment, AAA will consider all relevant factors where we can control or have influence on them. These factors include the sourcing of raw materials, our manufacturing processes, site generated waste disposal, customer product usage and ultimate disposal of our products.

General

1. AAA's actions to prevent pollution and minimise usage of materials, reduce waste, fuel and energy will include:
 - Avoid by eliminating or minimising any adverse environmental impact by evaluating in advance the effect of new designs and processes by using the latest appropriate technology
 - Reduce undertake continuous improvement activities develop and regularly review environmental objectives, targets and improvement plans
 - Control comply with all relevant legislation and regulations identify all operations and activities that can have a significant interaction with the environment and ensure that they are:
 - operated under documented specified conditions
 - regularly monitored and properly maintained
 - performed by trained competent Associates
 - Recycle recycle any remaining waste where possible
2. Implement, maintain, review and improve AAA's environmental management system which complies with ISO 14001 and Denso "Ecovision 2005" and the objectives of Denso Vision 2015.
3. Be in harmony with the local community:
Communicate with environmentally interested third parties and take their views into consideration.
